Figure 16-6. (A) Left eye 6:00 limbus after being marked with ink pen with the patient sitting upright on operating room table. (B) Dell marker used to outline 165-degree axis of (+) astigmatism (against-the-rule) prior to starting cataract surgery. (C) Felt-tip ink pen used to mark the 165-degree axis. (D) Toric IOL prior to insertion. (E) Irrigation/aspiration of cohesive viscoelastic is performed behind the toric IOL. (F) Hash marks of toric IOL aligned with the +165-degree pen marks. (G) Close up of IOL hash marks that will allow assessment of alignment postoperatively.
